

New Data Fields for *Corn* Test Results Trait/Event Tests

Updated May 28, 2008

This sheet specifies new data fields added to our website test results. If you download test results from our website into another database, this sheet is important.

On June 1, 2008 we will implement a new naming convention for corn trait tests that utilizes the trait and event. For example - previously, the RR test (Glyphosate tolerance) had three fields of information – ‘*Germ*’, ‘*Tof*’, and ‘*#Seeds*’. The new test names provide more trait clarification because each of the three GT (Glyphosate tolerance) events have their own ‘*Germ*’, ‘*Tof*’, and ‘*#Seeds*’.
